

**PRIVACY NOTICE ON THE PROCESSING OF PERSONAL DATA
PURSUANT TO ART. 13 OF REGULATION (EU) 2016/679 (“GDPR”)**

**DATA SUBJECT CATEGORY: PARTICIPANTS IN THE PILOT XR THEATER
– HEAT PROJECT –
ANONYMOUS QUALITY OF EXPERIENCE ASSESSMENT**

This notice is provided by the University of Cagliari, pursuant to Art. 13 of Regulation (EU) 2016/679, with regard to participation in the Pilot XR Theater, implemented within the scope of the HEAT project (EU funded research project under HORIZON Research and Innovation Actions Next Generation eXtended Reality – Project 101135637), and to the Quality of Experience (QoE) assessment. The activity is designed in accordance with the principles of lawfulness, fairness, transparency, data minimisation, and data protection by design and by default.

1. Data Controller, Data Protection Officer and Scientific Coordinator

Data Controller	Name: University of Cagliari Address: Via Università, 40 - 09124 Cagliari Email: privacy@unica.it PEC: protocollo@pec.unica.it
Data Protection Officer (DPO)	Email: dpo@unica.it PEC: protocollo@pec.unica.it Post: University of Cagliari, Via Università, 40 - 09124 Cagliari
Scientific Coordinator of the Pilot	Prof. Maurizio Murroni - maurizio.murroni@unica.it

2. Joint Controllers and Parties Involved

For certain activities of the Pilot, the University of Cagliari acts as joint controller pursuant to Art. 26 GDPR together with the project partners, each within the limits of their respective areas of competence. In particular:

- **Immersion S.A.S. (France):** development and management of the application platform based on the Unity engine, integrating the technical streams required for the delivery of the immersive experience.
- **i2CAT Foundation / Holomit (Spain):** streaming distribution of the theatrical content and possible processing of technical session metadata, to the extent necessary for service management.
- **FACHHOCHSCHULE ZENTRALSCHWEIZ HOCHSCHULE LUZERN – HSLU (Switzerland):** video acquisition and processing of the theatrical content, aimed at 3D rendering and the creation of graphic assets required for the implementation of further variants of the immersive experience.
- **University College Dublin – UCD (Ireland):** development and management of the olfactory dispensing system synchronised with the experience.
- **University of Padova:** scientific support for the Quality of Experience assessment. As the questionnaires are anonymous, the responses do not constitute personal data attributable to participants; any further activities involving personal data are governed by the project agreements.

- **Sardegna Teatro:** provider of the artistic content relating to the theatrical performance “Disigiù”; does not process participants’ personal data within the scope of the Pilot.

The joint controllers jointly determine the purposes and means of the processing necessary for the implementation of the Pilot and define, by means of an agreement pursuant to Art. 26 GDPR, their respective roles, responsibilities and relationship with data subjects. The essential elements of the agreement are made available upon request, within the limits provided by applicable law.

3. Context and Description of the Experience

The Pilot XR Theater is a scientific research activity of the University of Cagliari, carried out within the scope of the HEAT project, in which an immersive and multisensory theatrical experience inspired by the Sardegna Teatro performance “Disigiù” is recreated in a specially prepared physical space.

During the session, participants passively experience the immersive content through XR headsets used exclusively as display devices. Audiovisual content and multisensory stimuli synchronised with the scene are delivered, including olfactory effects. No active interactions with the system are envisaged.

XR headsets are not used to collect participants’ personal data, and eye tracking, face tracking, hand tracking, facial recognition or biometric acquisition functionalities are not activated.

At the beginning and/or end of the session, participants may be asked to complete anonymous questionnaires aimed at collecting subjective feedback on the quality of the experience, such as the perceived level of immersion, overall quality, emotional and narrative engagement, comfort/discomfort, and perception of audiovisual and olfactory stimuli.

4. Personal Data Processed

With regard to participation in the Pilot and the Quality of Experience assessment, no identifying personal data of participants is collected.

In particular, the following are not collected:

- first name, last name, contact details, email address, telephone number, account, student ID, personal codes or other direct identifiers;
- photographic images, video recordings, audio or audio-video recordings of participants;
- biometric data, data derived from facial recognition, eye tracking, face tracking, hand tracking or similar techniques;
- geolocation data, profiling data or data used for automated decisions relating to participants.

QoE assessment is carried out by means of anonymous questionnaires. Responses are not linked to the identity of the participant and are not connected to images, videos, credentials, accounts or other elements enabling identification of the person.

Any technical information generated by the systems used to deliver the experience is processed exclusively for the operation of the infrastructure and is not used to identify participants or to link questionnaire responses to individual persons.

5. Anonymous Questionnaires for Quality of Experience Assessment

At the beginning and/or end of the session, participants may be asked to complete anonymous questionnaires aimed at collecting subjective feedback on the experience.

The questionnaires may cover, by way of example:

- perceived level of immersion;
- overall quality of the experience;
- emotional and narrative engagement;
- comfort or discomfort during the experience;
- perception of audiovisual and olfactory stimuli;
- overall evaluation of the immersive theatrical experience.

The questionnaires are designed so as not to require identifying information. Participants are invited not to include, in any free-text responses, personal data of themselves or third parties, such as names, contact details, specific references or other elements that could make a person identifiable.

Responses are used exclusively for the purposes of scientific research, evaluation of the quality of the immersive experience, and aggregated statistical analysis of the Pilot results. Results may be communicated or published exclusively in anonymous, aggregated form, not attributable to individual participants.

6. Purposes of the Assessment and Legal Basis

The anonymous Quality of Experience assessment is aimed at conducting scientific research in the field of immersive and multisensory technologies applied to theatrical fruition, with particular reference to the evaluation of the perceived quality of the experience, the level of immersion and the comfort of participants.

As the questionnaires are anonymous and do not allow the direct or indirect identification of participants, the responses do not constitute personal data within the meaning of Art. 4(1) GDPR. The GDPR framework applies only to any processing of personal data that may be carried out in connection with activities other than or additional to the anonymous assessment described in this notice.

Should it become necessary, for currently unforeseen reasons, to collect or process participants' personal data, the University will provide a specific supplementary notice prior to the commencement of the relevant processing and will identify the applicable legal basis pursuant to Art. 6 GDPR.

7. Provision of Data and Participation

Participation in the Pilot XR Theater is voluntary. Completion of the anonymous questionnaires is optional. Non-completion has no consequences for participation in the experience, but means that the relevant feedback cannot be included in the statistical QoE analyses.

As no identifying data, images or videos of participants are collected, the provision of such data is not required in order to take part in the QoE assessment described in this notice.

8. Methods of Processing, Communication and Dissemination

Anonymous questionnaire responses are collected and analysed using manual, IT or electronic tools, according to logic strictly correlated with the stated research purposes and in compliance with the principles of data minimisation and confidentiality.

Anonymous data and aggregated statistical results may be shared with the scientific and technical partners of the project and used for reports, publications, scientific presentations, project reporting and dissemination activities, always in anonymous, aggregated form, not attributable to individual participants.

No dissemination of identifying personal data, images, audio or video recordings of participants is envisaged, as such data are not collected within the scope of the described activity.

9. Transfer to Third Countries

No transfers of participants' personal data to countries outside the European Economic Area or to international organisations are envisaged. Sharing of Pilot results, where applicable, will take place in anonymous and aggregated form.

10. Retention Period

As no identifying data, images, videos or audio-video recordings of participants are collected, no retention periods apply to these categories of data.

Anonymous questionnaire responses and aggregated or anonymised datasets may be retained for the time necessary to carry out the project, verify results, produce scientific outputs and for scientific archiving purposes. As the data are anonymous, retention may extend beyond the duration of the project, provided the data remain non-attributable to individual participants.

11. Rights of the Data Subject

With regard to any processing of personal data carried out by the University, the data subject may exercise, where the applicable conditions are met, the rights provided for under Arts. 15–22 GDPR, including access, rectification, erasure, restriction of processing, objection and, where applicable, data portability.

With regard to anonymous questionnaire responses, as the information is not associated with the identity of the participant and does not allow the identification of the individual author, it is not possible to identify the specific response attributable to a given participant for the exercise of individual rights.

Requests relating to any processing of personal data may be sent to the University of Cagliari: email privacy@unica.it; PEC protocollo@pec.unica.it; post: University of Cagliari, Via Università, 40 - 09124 Cagliari. The data subject may also contact the Data Protection Officer by writing to dpo@unica.it.

12. Complaint to the Supervisory Authority

A data subject who considers that processing of personal data infringes applicable law has the right to lodge a complaint with the Italian Data Protection Authority (Garante per la Protezione dei Dati Personali), pursuant to Art. 77 GDPR, in accordance with the procedures indicated on the Authority's institutional website, without prejudice to any other administrative or judicial remedy.
